

Cyber Cup Hackathon

Tracks:

Business and Finance:

Cryptocurrencies and blockchains have created a wave in the market. Stock and mutual fund traders are already leveraging the power of computers and data analytics. So are banks and even the smallest of cash-counters. Think, innovate and create something that'll get the green \$ pouring in.

IoT and Security:

A world of devices connected by internet opens up opportunities for us that were previously unthinkable. Innovative apps can be built that can allow devices to share data and take intelligent decisions.

AI and ML:

Are you fascinated by how Netflix recommends the movies you'll like? Have you wondered what is the Google algorithm that shows you such accurate search results? Machine Learning is behind these innovations. It represents a key evolution in the fields of computer science, data analysis, software engineering, and artificial intelligence.

From bots, to personal assistants, and shopping automation, what the future holds for artificial intelligence can be described for sure with at least one word; Exciting. Our machines and devices are getting faster, more efficient and slowly learning to do things on their own.

Health and Fitness:

With revolutionized software and machinery, effective treatment and disease control could not have been made easier. Smart trackers and real-time sensors are all the rage these days. Code away at innovative ideas that address these problems that loom over the society and the health and wellness industry today.

Surprise Theme!

This would be released on the spot.
